

Sleep Stages Chart of Vizsla Pups

<p>Stage 1</p> <p>0 to 3 weeks of age</p>	<ul style="list-style-type: none"> • When a Vizsla pup is first born, they're blind and deaf. • They spend 90% of their time snoozing. • They need to sleep a lot due to the fact their body is developing rapidly. • The eyes open first at weeks and the ears generally follow around 3 weeks. • By the end of this stage, the pup is aware of the world and starts interacting.
<p>Stage 2</p> <p>3 to 7 weeks of age</p>	<ul style="list-style-type: none"> • At 3 weeks old, a Vizsla pup can see, interact and chew. • Now the pup is gaining weight. • However, between ingesting, eliminating teething, and weaning, there's still plenty of snoozing taking place up to 70% of the ordinary day. • This is to collect the energy for playing and fighting with siblings
<p>Stage 3</p> <p>7 to 12 weeks of age</p>	<ul style="list-style-type: none"> • By week 7, many Vizsla dogs will be making their way to a new forever home. • They are ready to live without their mom and siblings, going through different training(including crate training). • While it can appear like your Vizsla pup spends a maximum of the nighttime whining or crying in their crate at first, sleep stays a top priority. • They do not compromise with their sleep.
<p>Stage 4</p> <p>12 to 17 weeks of age</p>	<ul style="list-style-type: none"> • The time from 12 to 17 weeks is highly active for your pup. • Your Vizsla remains to ingest a pup diet with more common feedings. • There's still plenty of inner growth and improvement that is underway. • Your pup's body is remodelling and maturing. • That is why between every activity, you'll see a lot of sleep.
<p>Stage 5</p> <p>17 to 40 weeks of age</p>	<ul style="list-style-type: none"> • Vizsla will start ingesting more like an adult canine. • This will not change their need for plenty of sleep. • At 9 months, your pup is sexually maturing and ready to proceed to the next level. • Therefore, the sleep time remains the same
<p>Stage 6</p> <p>40 to 52 weeks of age</p>	<ul style="list-style-type: none"> • More changes can be seen in this stage. • Your vet will suggest you to spay or neuter your canine. • In this stage, the canine become very attentive, even while sleeping. • Moreover, they will need daily workout for atleast 1 hour. • This will balance their energy and sleep completely.
<p>Stage 7</p> <p>1 year & Above</p>	<ul style="list-style-type: none"> • The canines growth is now decreased • Therefore it needs less sleep in comparison to the above stages. • 8-14 hours are sufficient of the canines above 1 year of age.
